ROSCO DIGITAL EXPERIENCE LIVE ACTION BACKDROPS

Rosco's award-winning backdrop technology is now available for use in Virtual Production! The RDX LAB System with software by FuseFX is a patent-pending ecosystem that creates interactive background imagery for virtual productions. We offer custom solutions including image capture, retouching, and consultation, along with a robust library of background images suitable for use with the RDX LAB System.

Rosco's RDX LAB System is the right solution for virtual production projects that need:

• Photoreal imagery, captured for the specific purpose of becoming a cinematic background.

• Real time adjustments of the image on set, at camera.

• Artistic control over specific elements within the image.

• An easy step into virtual production – without the complexity and time constraints of full 3D renderings.

Image Control Features In The RDX LAB SYSTEM Table App Include:

Time Of Day	Brightness & Contrast	Atmosphere
Focus & Image Depth	Horizon Line	Moving Elements

Technical Notes:

• The RDX LAB System can be used on any type of LED wall used in virtual production.

• Rosco does not provide LED wall equipment or integration services. A vendor list can be provided if needed.
